Introduction:

We are retro game enthusiasts who have taken notice of the disappearance of retro 8-bit style games. In response to this, we have made a unique website with an 8-bit old-school theme. Observing the increasing levels of stress in society, we have created this website as a viable option for stress relief, offering users a unique and enjoyable experience to unwind and escape from the pressures of everyday life.

Features:

1. Big Timer Display:

   - A prominent countdown timer, akin to a count-up display, serves as a visual representation of the time spent on the platform.

2. Experience Points (EXP) System:

   - Users accumulate experience points as they engage in gameplay.

   - EXP can be used to level up the user's chosen "hero," enhancing their capabilities for defeating bosses.

3. Retro Gaming Library:

   - Enjoy a variety of retro games with an authentic 8-bit user interface.

4. Lives System:

   - Users start with a limited set of lives (5 lives, initially).

   - Successfully challenging a boss rewards users with keys.

   - Keys can be used to unlock the next game via a randomized gacha system.

5. Stats Checker:

   - Users can access a detailed statistics checker, displaying upgraded features and achievements.

6. Full-Screen Mode:

   - Immerse yourself completely in the retro gaming experience with a full-screen option.

Objective: Our goal is to provide a fun and nostalgic space where users can unwind, destress, and relive the joy of retro gaming. The platform's unique features, such as the experience points system, life limitations, and the gacha-style unlocking mechanism, add an element of excitement and progression to the user experience.

By incorporating these elements, Unproductive Clockwork Pixel aims to create an engaging and stress-relieving environment for computer science enthusiasts and retro game lovers alike. Join us on this journey down memory lane, where stress fades away, and the joy of gaming takes center stage.
